

The Miners

Corrected Gravity Corrections? Hmmmm

Hmmmmmm, did the bouguer correction do enough?

- That's what this implies!

Bouguer assumes flat slabs of rock between stations, DEM gives actual terrain variations - why are the results still so similar?

Clay...

Time-Depth Limitation

In ground penetrating radar the radar wave travels to the reflector and then back, which makes depth half of the two way travel time. We know that the Browns park formation is predominantly sandstone in this area so reasonable velocity ranges from 0.1-0.15 m/ns. Therefore:

$$t = \frac{2d}{v}$$

We are assuming that the depth to the ceiling of the mine shaft, at our survey site, is anywhere from 4-10 m. This means that:

$$t_{4m} = \frac{2 \cdot 4 \text{ m}}{0.1 \text{ m/ns}} = 80 \text{ ns}$$

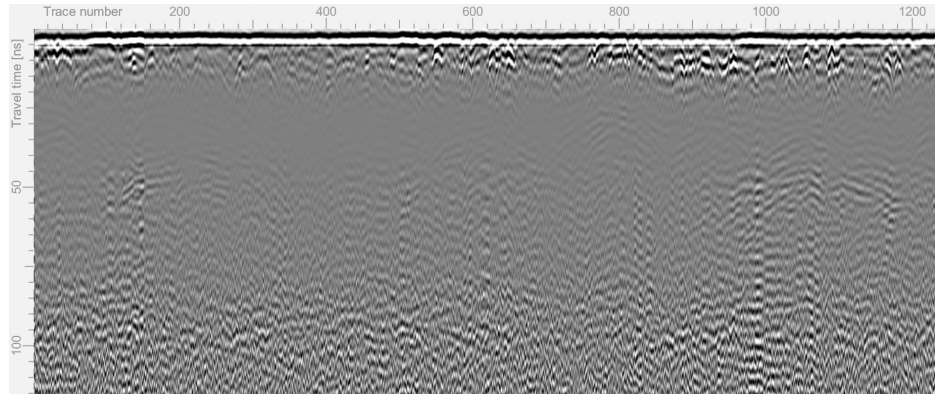

$$t_{10m} = \frac{2 \cdot 10 \text{ m}}{0.1 \text{ m/ns}} = 200 \text{ ns}$$

$$t_{4m} = \frac{2 \cdot 4 \text{ m}}{0.15 \text{ m/ns}} = 53 \text{ ns}$$

$$t_{10m} = \frac{2 \cdot 10 \text{ m}}{0.15 \text{ m/ns}} = 133 \text{ ns}$$

south. Opposite the eastern or 'upper end of the village, some 300 feet above the valley of the river, is an "onyx mine." Here a horizontal tunnel has been carried perhaps 200 feet into the side of the mountain. A cross section of this tunnel is not less than six feet square. It is perfectly dry and is wholly in what seems to be unmodified drift. The onyx is scattered through this drift in pieces varying from a cubic inch to blocks three or four feet square and eight or ten feet long. These pieces show, in many cases, unmistakable evidence of erosion or weathering, and they are so packed in with the clay and granite pebbles that we could hardly pull out small pieces from the walls of the tunnel. How extensive the

Abstract!

- Finished outline
- Finished acknowledgements?
 - Did we miss anyone?

Acknowledgments

The authors would like to thank the city of Steamboat Springs, Routt County (Tony Brown), Dawson Geophysics, Geophysical Technology Inc., Steamboat Springs Parks & Recreation (Stephanie Munro, Angela Cosby), Stagecoach State Park (Craig Preston), Colorado Mountain College, Mines Foundation and the Geophysics Field Camp Endowed Fund, Bob Basker, Todd Fockler, Seth Haines, Roy Bowling, Dr. Bob Raynolds, Mines faculty and staff, and all of our field TA's.

Geophysical Characterization of the Historic Onyx Mine in Steamboat Springs, CO

Molly Bilhartz, Samantha Lopez, Tessa Murphy: Colorado School of Mines Geophysics

Presentation Slides

[illegible]

- Started slides
- Started presenter scripts

To do:

- Meet with Joe for gravity
 - Is he ignoring us? :(((
- Get 50% of our paper done
- Rough draft of presentation
 - Including script: who says what
- Coordinate outfits?
 - Black slacks & green top??
 - More casual???
