Howelsen Park: 40°28'52" N, 106°50'5" W

Group 3: Raquel, Alex, Chandler, and Samantha

Data Lead: Raquel

Survey Objective: We hope to observe the travertine deposits up on the hill by Howelsen Park and to maybe be able to characterize the shape of the deposit.

File Naming Information: The files are named 03.dat through 18.dat, each representing a shot taken in the field. Each shot consists of 4 stacks, and each shot is 6 meters apart. 03.dat is at 0m, 04.dat is at 6m, etc.

Data Concerns and Safety Issues: The data so far looks good! It looks like channel 18 is fuzzy, so there may not have been good coupling between that node and the ground. I recommend omitting channel 18 from analysis.
